

Information

The online curriculum on domestic violence has been developed by a provincial expert panel with funding provided by the Government of Ontario. The curriculum is competency-based with competencies derived from the research literature and reviewed by a large group of stakeholders from across the province. Under the terms of the contract with the province we have agreed to evaluate the curriculum for its ability to improve health care providers' sense of competency when treating patients who may have experienced domestic violence. This will be done through a pre test/post test evaluation. The post test will be sent to your email address but your address will not be shared with other organizations or lists. Please read the confidentiality and consent forms below before proceeding.

Confidentiality Statement

The data collected from this survey and users on the system will be used to evaluate the effectiveness of this online training program in domestic violence with the goal of providing the best emergency care possible to victims of domestic violence.

The data will be confidential and held in a secure environment. All the data used in the analysis will be aggregated; no personally identifying information will be used. Any presentations or publications based on this data will be presented with key identifiers removed.

Should you have any questions, please feel free to contact Robin Mason at Robin.Mason@wchospital.ca, for clarification.

Consent Statement

I agree that my participation in the online training on domestic violence is voluntary and that there is no penalty should I choose not to complete the training. I agree that the responses I provide on the pre test, the data gathered from the training and from the post test, may all be used for research purposes. It is clear to me that all data will be aggregated (grouped together with all other responses) and that my personal information, including my email address, will remain confidential. I will not be identifiable in any presentation or publication resulting from this study.
